

Dense Vinyl Blocker offers noise reduction for those on a tight budget.

Putterman Athletics has been equipping facilities for over 100 years with innovative court products, and our new **NoiseGard™** line of acoustic barriers adds to that legacy!

NoiseGard™ DVB is a 40 oz, polyester-reinforced vinyl fabric system used to reduce excess sound transmission. It can be customized to fit any fence system, and modified to include a number of different top, side and bottom closures and fencing attachments.

NoiseGard™ DVB can be used as a divider to reduce the impact of noise on adjacent areas.

NoiseGard™ DVB material offers a pass-through reduction (STC) of up to 13 db.

NoiseGard™ DVB is manufactured to include anti-microbial, anti-fungal and anti-mildew admixtures and is formulated to include UV inhibitors for outdoor use.

NoiseGard™ DVB is available in an array of colors. Our heavy vinyls can also be manufactured as nearly clear curtains, or with clear windows, making them great for public parks that require clear sight lines from outside the fences for safety, and when separating pickleball courts and other athletic courts indoors in shared buildings.

NoiseGard

DENSE VINYL BLOCKER

Features & Benefits:

- Available in multiple colors
- Custom imprinting available
- Attractive pricing
- Lighter weight material allows for larger panels
- Great for separating pickleball and tennis in shared buildings
