AN IDEA INSPIRED BY A LIFELONG LOVE OF OUTDOOR TENNIS IS NOW CHANGING THE LOOK OF INDOOR TENNIS DIVIDER CURTAINS AND OFFERING NEW POSSIBILITIES FOR INDOOR TENNIS FACILITIES

By Putterman Athletics

Putterman Athletics is **revolutionizing the indoor divider curtain business** with concept design that allows for curtains custom engineered specifically for indoor facilities. As a company we at Putterman Athletics have been in the athletics manufacturing business for a while; **(100 years to be exact)** the inspiration for our latest innovations in indoor tennis curtains comes from projects where we have **proudly manufactured for USTA facilities** and outdoor tennis courts all over the world.

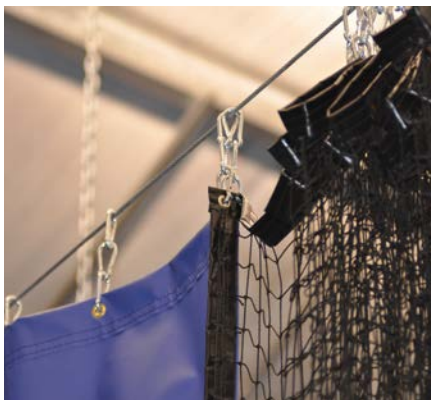

Outdoor tennis facility windscreens whether custom imprinted or not add functionality and beauty to tennis courts. We have **invested heavily in next generation printing and manufacturing technology** that allows us to produce attractive and functional tennis divider curtains in a construction with overall greater dimensional stability.

It's not just the curtain construction that is unique, it is also the quality of our materials and construction. Our curtains react evenly to any environmental stress. They also clean easily, **hold their shape over time**, and our Enduraprint process keeps graphics looking great over time. With this technology as a base, the **curtains offer a wide range of design possibilities**. We offer solid vinyl curtains, as well as curtain and netting hybrid designs. These curtains are also the ideal product for print on demand technology.

Our custom designed and engineered curtains are perfect for architects looking for a curtain that works perfectly with a developed design or an existing environment. We offer capable design, engineering, manufacturing, hardware, and installation. **The results are less institutional and more hospitality, an important trend in indoor athletics.**

In addition to allowing more creative and unique curtains, the end product is more durable, which means these curtains last longer and are **less frequently replaced**. The entire curtain can be disinfected, and vinyl curtains can be heat welded so there are no seams or hems to trap dust or shelter microbes. Contact us today to spec your next project.
